

## QUESTIONS for HAL PUTHOFF & SRI on 16 FEB MEETING

- > NATURE of each test being / to be run w/ INCO?
- > RATIONALE / PURPOSE for each test-series - i.e.:
  - what does he hope learn / conclude from each?
  - what elimination / pointing to w/ MECH / REALITY of MECHANISM?
  - what follow-up intent based on each pos / neg result?
  - Do they work w/ his <sup>- APPORT -</sup> OUT-OF-BODY (OOB) Capabilities?
- > ASIDE from TESTING the PHENOMENA, what TESTS of INCO per se are planned? - e.g.:
  - DURING TESTS = EKG, EEG, EMG, other?
  - Normal State = " " " " ?
  - VISUAL / AUDIO Acuity RANGE? X-RAY? INFRARED?
  - other / complete physical. Blood, etc
  - Biographic
  - Behavioral Testing: ALLPORT-VERNON VALUES, Firo-B, etc
  - Do / Can they get the ASPR exp. + physiological data?
  - Moderate applic. of PSYCHOPHARMACOLOGY to Testing?
- > How COOPERATIVE is he - e.g., to NIH for testing (w/ SRI getting all data)?
- > Related questions re URI?

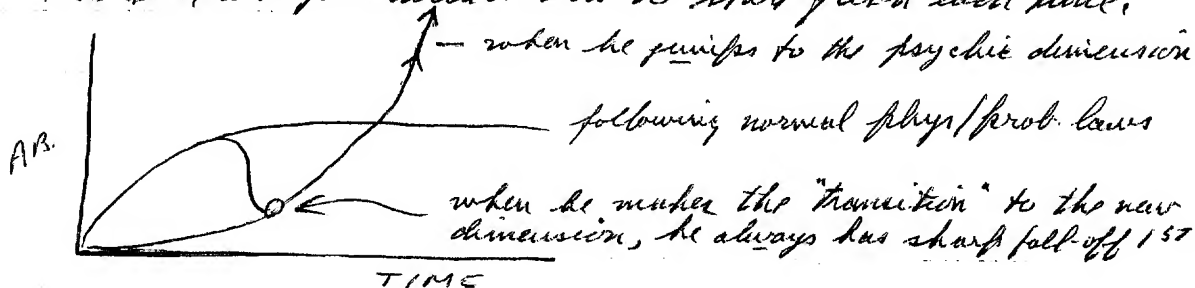

## PROJECT REVIEW - by Hal PUTHOFF - :

1. Magnetometer experiment - w/ mag. field decaying at a certain rate - hypo "looks" (OOB) at the mag (probing {tactilely / visually}) + then speeds up + then suspends the decay! And it happens again later (involuntarily) as he describes what he did.
  2. Later = one wk of experiments (SC11 [REDACTED])
    - > skill game - ranged from 4 to 7 out of 10 (1000 to 1 odds)
    - > thermocouples - offering temps - effective on command - to 1/3 of degree [Schmeidler at COLUMBIA says he got up to 5 degrees]
    - > Random-number generator - double-blind exp. - not too well but showed increase learning!
- Then SRI decided worth in-depth study!

> Now = 4-phases: Magnet; Alt. devices; focus on his best tricks & then we examine!

> 1<sup>st</sup> Test during last 6 weeks:

- Laser-random on & off - learns up 2 standard deviations (25 to 1) - \* subjective = misses due to residual image & studies how to start fresh each time.

- later exp. w/ wood/steel/copper/plastic etc - some indications that, while the material is unip. at 1<sup>st</sup>, maybe that the "shape" factor is more unip.
- The thing that makes a difference, for him, is not DISTANCE - but whether he "likes" the experiment or not!

> Next 6 wks = more "perception" tests (at greater distance) & start the PK tests - then analyze all the data in their computers & then focus on that which he does best!

> He says he believes any one can learn to do this!

SG1G

- Geller now in Ossining NY - waiting for more funds! & his visa expires 1 July. (staying w/ POKARICH).

→ TSD believes they will follow on w/ SRI.

→ Would cost ca 60-75k for 6 mos w/ Geller!

→ NASA may be interested to 80k

Approved For Release 2000/08/07 : CIA-RDP96-00787R000400070024-7

→ re Emotional/attitudes - both very good at it!!

- Very int. experiments - w/ EEG transference to  
 July. A in shielded room when only B  
 has strobe lights shined in his eyes!!

|| - Hal's idea - force - that hugo/Uri are  
 producing correlation phen. same as CASEA does!  
 Controlling "noise" - & w/o applying force, <sup>by</sup> warping  
 the "space"

> Don <sup>SCHUICK</sup> SA (VP of SRI) - in fountain pen class.

> hugo = everyone has the ability innately & only  
 having upper prevent them -

→ SRI - to have hugo fashion ~~good~~ <sup>program</sup> of drug!  
 INCO - already has ~~given~~ made up TEST for  
 detecting psych ability - choosing between  
 pairs of enco/inter words!!

- Both talk w/ non-physical people - ! -

> - They (SRI) thought CIA had sent  
 Geller to SRI to prove their tests  
 weren't good enough to detect  
 a fraud!
